SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Sir:

Pursuant to 37 C.F.R. §§ 1.56, 1.97 and 1.98, Applicant hereby submits an Information Disclosure Statement for consideration by the Examiner.

I. **LIST OF PATENTS, PUBLICATIONS, AND OTHER INFORMATION**

The patents, publications and other information requested to be considered by the Office (except unpublished U.S. patent applications) are listed on Form 1449 attached hereto.

II. **COPIES**

A. Submitted herewith is a legible copy of (i) each U.S. patent application publication and U.S. and foreign patent; (ii) each publication or that portion which caused it to be listed; (iii) for each cross-referenced pending U.S. application listed below in Section IV, the application specification including the claims, and any drawing of the application which caused it to be listed including the claims directed to that portion; and (iv) all other information or that portion which caused it to be listed.

B. Any patents, publications or other information which are listed on Form 1449 or on the copies of PTO-892, but which are not enclosed herewith, were previously cited by or submitted to the PTO in one of the following applications which has been relied upon for an earlier filing date under 35 U.S.C. § 120:

U.S. Serial Number

U.S. Filing Date

C. X Because the present application was/is being filed after June 30, 2003, no copies of the U.S. patents or U.S. patent application publications which are

listed on the attached Form 1449 are enclosed pursuant to the waiver of 37 C.F.R. § 1.98(a)(2)(i). Any foreign patent documents or non-patent literature listed on the attached Form 1449 are enclosed herewith.

D. This is a PCT application in the entry of the National Phase in the United States. A copy of the International Search Report is attached for the Examiner's information. The documents listed on the International Search Report are listed on the attached Form-1449 for consideration by the Examiner and for listing on any patent resulting from this application. If the International Search Report was from the US, EPO, or JPO search authorities, copies of these references should have been supplied to the USPTO under the trilateral agreement and are believed to be in the file of the above-identified application. (MPEP 1893.03(g))

III. CONCISE EXPLANATION OF THE RELEVANCE (check at least one box)

A. Except as may be indicated below in (B), all of the patents, publications or other information are in the English language (concise explanation not required).

B. A concise explanation of the relevance of each patent, publication or other information listed that is not in the English language is as follows (see 37 C.F.R. § 1.98(a)(3)):

1. See the attached foreign patent office communication from a counterpart foreign application.

2. English abstracts are provided as indicated on the attached PTO 1449 Form.

3. Other: A brief summary of the following documents that are not in English and for which English translations or English abstracts are not provided are as follows:

50-032423, Toku-kai Sho, Published March 29, 1975 – Describes in general, in a control circuit for an electric motor for powering a vehicle, a motor (2) that is driven when a switch (9) is turned ON. In addition, when the switch (9) is turned OFF and the switch (8) is turned OFF, a control signal from the control circuit (7) is sent to transistors (5) and (6). The transistor (5) is disconnected, the transistor (6) becomes conductive, and motor braking occurs.

54-037214, Toku-kai Sho, Published March 19, 1979 – Describes in general, when a first transistor Q1 is turned ON and a second transistor Q2 is turned OFF, the motor M rotates. When the first transistor Q1 is turned OFF and the second transistor Q2 is turned ON, braking of the motor M occurs.

58-031791, Jitsu, kai Sho, Published March 2, 1983 – Describes in general, a dynamic braking circuit consisting of a resistor 6 and a transistor 18 is connected in parallel to a direct current electric motor 5. When a bi-directional three thyristor 10 for power supply is turned OFF, the transistor 15 turns OFF, and dynamic braking is applied to the direct current motor 5 by the transistor 18 and the resistor 6.

49-079000, Toku-kai Sho, Published July 30, 1974 – Describes in general, in the embodiments, a switch circuit 18 providing a microswitch 16 is connected to a direct current electric motor 10 of an electric screw driver. When the button of the microswitch 16 is pressed and turned ON, the electric motor rotates. When the button is turned OFF, the connection between the electric motor and the power source is interrupted, simultaneously the armature of the electric motor is shorted, and the rotation of the electric motor stops due to the braking action.

57-027791, Jitsu-kai Sho, Published February 13, 1982 – Describes in general, when a switch 2 is turned OFF, the switch detection circuit 8 detects that switch 2 has been turned OFF, and the result is input into a gate control 7. The gate control circuit turns ON a semiconductor switch 6 to brake a direct current electric motor 3.

C. ____ The following additional information is provided for the Examiner's consideration.

IV. CROSS REFERENCE TO RELATED APPLICATION(S)

A. ____ The Examiner is advised that the following co-pending application(s) contain(s) subject matter that may be related to the present application. By bringing this(these) application(s) to the Examiner's attention, Applicant(s) does(do) not waive the confidentiality provisions of 35 U.S.C. § 122.
